

April 7, 2014

To Whom it May Concern:

This letter is my personal recommendation for Dr. Olivier Augereau. In 2008, he had visited my laboratory for 4 months for taking the internship course "Random Number Generation Based on Chaos Theory and Its Applications" which is supervised by me.

During the internship program, he demonstrated excellent skills and abilities to complete the internship course which includes subjects related to nonlinear theory (chaos theory) and CDMA (code division multiple access) communications. Actually, he didn't have the detailed knowledge about nonlinear theory and CDMA communication before the internship. However, after my brief lecture about the course including chaos theory and CDMA communications, he quickly understood the key points of each task given by me. He tackled each task and completed it within the given time. I noticed not only his excellent skills and abilities but also his enthusiasm about the course and its related area.

In 2010, I visited ENSEIRB-MATMECA in Bordeaux for discussing a new joint education program. At that time, he was a PhD student in the Bordeaux Laboratory of Computer Science in an image analysis team. He kindly guided me to several laboratories under his arrangement. Also, I talked with him about his research and future. I felt his further growth since the internship in 2008.

I believe Dr. Olivier Augereau has great potentials as a researcher and he has abilities to carry on any prospective projects. Also, he is a reliable person and he can make a good job in a team. I highly recommend Dr. Olivier Augereau as a candidate for employment.

Sincerely,

Akio Tsuneda, Dr.Eng.

Associate Professor

Department of Computer Science and Electrical Engineering, Kumamoto University
